When choosing a wheel for your pet, be sure you get one that is large enough and of the correct material for their species.

When your pet runs on a wheel of incorrect size:

- Their spine is arched.
- Their head is bent above shoulders.
- Their legs are compressed or stretched and in an unnatural position.
- Their gait while running is awkward, restricted, or uncomfortable.

When your pet runs on a wheel of correct size:

- Their spine is straight.
- Their head and shoulders align.
- Their legs are relaxed and in a natural position.
- Their gait while running is normal and comfortable.
